

Certificate of Appreciation

To whom it may concern,

We would like to recognize the outstanding contribution, effort, and dedication of Adam Zhou to our team as a volunteer Senior research assistant for the CoronaNet Research Project. Adam was active with our project from 2020-04-02 to 2021-04-14 and, in that time, coded and updated policy information for United States. Without the support of our dedicated RAs, such as Adam Zhou, we would not be able to sustain our pace of policy documentation which, to date, counts more than 100 thousand policies from virtually every country in the world.

The CoronaNet Research Project is working to gather comprehensive and global data on government responses to the COVID-19 crisis. This work includes gathering information about which governments are responding to the coronavirus, toward whom policies are targeted (e.g. other countries), the types of policies enacted (e.g. travel restrictions, banning exports of masks) and their timing and duration. For more information, see www.coronanet-project.org.

Adam has been a country expert for United States. This role involves researching and creating a comprehensive overview of government policies enacted in United States as well as collecting and entering new and updated policy information related to COVID-19. Becoming a country expert requires passing a series of trainings on how to code data in the CoronaNet database, which uses a custom Qualtrics survey instrument, keeping up with policy coding on a weekly basis, and attending weekly country- or regional coordination meetings as well as project-wide meetings.

Based on their performance and experience, RAs are promoted, first to Advanced RAs and then to Expert RAs. Our senior-most RAs position is that of Senior RA, which is the position currently held by Adam. The role involves coding an exceptional number of 500 policies or more and being engaged as a research assistant for at least 12 months. Senior research assistants have gained profound knowledge of PHSM data and the CoronaNet dataset. They facilitate the development of the taxonomy and the project structure, and train other research assistants. With their outstanding expertise, they play a pivotal role in the success of the project.

In conclusion, we would like to reiterate our thanks to Adam Zhou for supporting these important and time-sensitive collection efforts and for being part of the CoronaNet community.
